

Power BI Day 2

One-day live course - virtual or at your offices

A report only helps once the right people can see it and trust the numbers. This day follows on from Day 1. In the morning your team shares their work in the Power BI Service with dashboards, workspaces and apps. In the afternoon they go back to Power BI Desktop to add their own calculations, link tables and clean a messy export.

What you will be able to do

- Find your way around the Power BI Service and build a report in the browser
- Pin visuals to a dashboard, set alerts and subscribe to updates by email
- Share work through workspaces and apps, and analyse the data model in Excel
- Create calculated columns for sales, profit and dates with simple DAX
- Write measures with SUM, DIVIDE and CALCULATE, and relate a lookup table
- Clean a messy export in the Query Editor before it is loaded

The day at a glance

- The Power BI Service - the published report, its options, and a report built in the browser
- Dashboards - pinning tiles, alerts, subscriptions and the mobile layout
- Workspaces, apps and Excel - sharing with a team, Analyze in Excel and export to PowerPoint
- Calculated columns - sales, profit, year, month and weekday columns
- Measures and relationships - first measures, CALCULATE and a lookup table in Model view
- Query Editor and Copilot - cleaning a messy export, and a look at Copilot in Power BI
